

Based on U. S. Steel's reasonable efforts to investigate the sourcing of materials through its supply chain, the only products manufactured by U. S. Steel in 2020 that contain 3TG and are subject to the Rule are its tin mill products having a tin coating. Any other trace elements of 3TG present in U. S. Steel's products and used in the manufacture of U. S. Steel's products originate from scrap steel, procured by U. S. Steel from a scrap or recycled source. Based on its reasonable country of origin inquiry, to the best of its knowledge, throughout 2020, U. S. Steel did not manufacture any products that used 3TG sourced from the Covered Countries that financed or benefited armed groups in that region.

In making its reasonable country of origin inquiry, U. S. Steel collected questionnaires, certificates of analysis, or conflict minerals statements from all of its tin suppliers. A review of the documentation received from these suppliers showed that the 3TG incorporated in products purchased by U. S. Steel in calendar year 2020 that were necessary to the functionality or production of its products and used in the manufacture of its products did not originate from any of the Covered Countries or came from recycled or scrap sources.

Therefore, U. S. Steel has determined that no additional due diligence measures were required to be taken.
